

Jefferson Acute Rehabilitation Unit

Clinical Outcomes and Patient Satisfaction

Patient Characteristics Fiscal Year 2018

This chart describes the diagnosis of patients served by the Jefferson Acute Rehabilitation Unit July 2017 through June 2018. Four hundred and thirty (448) individuals received inpatient rehabilitation on Jefferson's Rehabilitation Unit.

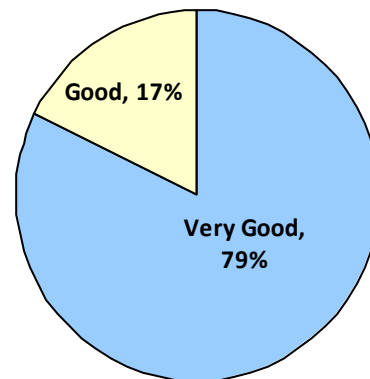

*Includes traumatic and non-traumatic

Patient Satisfaction

In the period from July 2017 through June 2018, ninety six percent (96%) of the patients who completed our Patient Satisfaction Survey after discharge were likely to recommend the Jefferson Acute Rehabilitation Unit to friends or family.

July 2017-June 2018

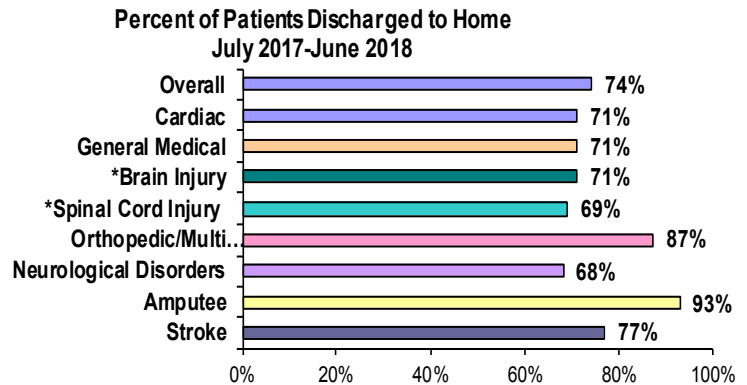

Discharge Information

A major goal of our rehab program is to enable people to return home following rehabilitation.

Many of our patients with traumatic spinal cord injury are transferred to Magee Rehabilitation Hospital or other rehabilitation facilities to continue their inpatient programs.

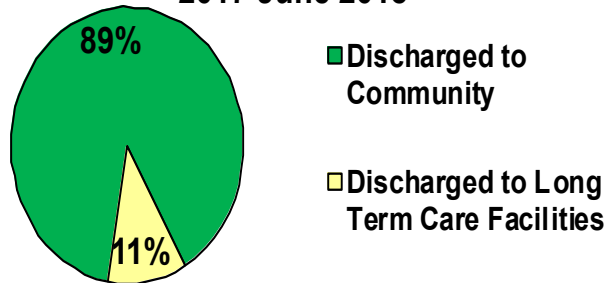

Rehabilitation focuses on maximizing independence in mobility and tasks of daily living. Family training is also an important part of rehabilitation.

* Includes traumatic and non-traumatic

Spinal Cord Injury Program Discharge Information

Discharge Location of Patients With Traumatic Spinal Cord Injury - July 2017-June 2018

Our rehabilitation program for patients with traumatic spinal cord injury is part of the Regional Spinal Cord Injury Center of the Delaware Valley.

The Center provides a coordinated system of care for individuals disabled by spinal cord injury and includes both Jefferson Acute Rehabilitation Unit and Magee Rehabilitation Hospital.

The graph on the left shows the discharge destination for all traumatic spinal cord injury patients who received rehabilitation on the Jefferson Acute Rehab Unit.

Spinal Cord Injury Program Patient Characteristics

A total of one hundred and thirty nine (150) patients with traumatic spinal cord injury were treated by the Spinal Cord Injury Program in FY 2018. Twenty-eight (32) of those patients received all or part of their rehabilitation within the Thomas Jefferson University Hospital Health System.

This chart describes the types of patients with traumatic spinal cord injury served by the Jefferson Acute Rehabilitation Unit during FY 2018.
